

1 APPARATUS AND METHOD FOR PREVENTING FLUID TRANSFER BETWEEN  
2 AN OVIDUCT AND A UTERINE CAVITY

3

4 ABSTRACT

5

6 Apparatus for preventing fluid transfer through an  
7 opening connecting an oviduct to a uterine cavity includes  
8 a body having a base with a periphery and a seal carried by  
9 the body for overlying and engaging uterine tissue leading  
10 to the opening. The seal receives fibroblast in-growth to  
11 create a hermetic seal between the oviduct and the uterine  
12 cavity. A peripheral anchor portion extends from the base  
13 for securing the body to the uterine tissue leading to the  
14 opening, the base overlying the opening.
